SUMMARY

Data Analytics Fellow with 2+ years of experience supporting cross-functional initiatives, analyzing business data, and improving operational workflows. Experienced in SQL, Python, Power BI, and JavaScript with a background in implementing cross-functional workflows. Passionate about building user-centered products by leveraging data, defining business requirements, and contributing to product strategy and continuous improvement.

PROFESSIONAL EXPERIENCE

Associate Product Manager - New York, NY

June 2024 - Present

Windy City Coders - Part-Time

- Conducted market research, customer interviews, and competitive analysis to identify user needs, define product requirements, and contribute to product strategy and roadmap planning.
- Partnered with cross-functional stakeholders to translate business needs into user stories, product specifications, and prioritized backlog items, supporting Agile sprint planning and feature delivery.
- Monitored product performance metrics and user feedback to identify opportunities for optimization, inform product decisions, and enhance the customer experience.
- Coordinated product testing, quality assurance, and release readiness while tracking project milestones and communicating progress to key stakeholders.

Executive Assistant (CFO and General Counsel) - New York, NY

August 2024 - March 2026

Prime Staffing Agency - Savills

- Analyzed legal and financial data to identify trends and support business decision-making across Legal and Finance teams.
- Supported Power BI reporting for the 2026 legal department budget, providing stakeholders with visibility into spending trends and forecasting.
- Partnered with Legal, Finance, and IT teams to identify workflow improvements and streamline document management and approval processes.
- Logged, categorized, and tracked technical issues in Azure DevOps, helping prioritize system enhancements and improve operational efficiency.
- Managed document execution and e-signature workflows while ensuring compliance and improving process consistency.

ACHIEVEMENTS

Mastercard X TKH Hackathon - Developed a Web3-based application that enables users to obtain verifiable financial credentials for the purpose of building credit and financial security.

Bloomberg X TKH Hackathon - Runner-up, People's Choice Award. Developed a TypeScript-based iOS weather app featuring hyperlocal AQI insights, historical weather comparisons, and an AI-powered chatbot to improve air quality awareness.
